

TEGISA Giessereianlagen und Industrieöfen GmbH

About this organisation

Machine translation

This organisation has been machine-translated based on data provided in German.

TEGISA GmbH is a company for the development, planning and construction of foundry systems for non-ferrous metals and iron/steel casting. The special focus is on the inductive heating of furnace systems. Both crucible inductors and channel inductors are calculated, built and commissioned. The range of services includes the construction of furnaces for melting, holding or casting as well as the modernisation of existing systems.

Melting, holding and casting furnaces are offered for various alloys, particularly in the aluminium sector. The higher the technical process requirements, the more suitable these customised systems are. One focus is the use of low-pressure casting (LP casting). LP technology is used both for transferring metals between furnace systems and for precise dosing according to specified pressure curves. Both air and gases (e.g. nitrogen, argon) can be used.

Robert-Perthel-Str. 64-66
50739 Köln
North Rhine-Westphalia
