## **Enrichment Technology Company Limited**

**Branch office Germany** 

### About this organisation

### **Machine translation**

This profile has been machine-translated based on data provided in German.

Enrichment Technology Company Limited, a joint venture between Urenco and Areva, is a world leader in the manufacture of ultra gas centrifuges (www.enritec.com). The latest developments aim to utilise energy storage based on the flywheel principle. The product, EnWheel®, enables a decentralised energy storage concept with a long service life and a high number of cycles (www.stornetic.com).

Enrichment Technology has been using carbon fibre products since the early 1980s. Thanks to its many years of experience, it has been possible to build up the company in such a way that it can demonstrably manufacture several 100,000 CFRP products per year. The products are mainly manufactured using the winding and braiding process with subsequent RTM technology. The company is set up in such a way that it can characterise the initial analysis, quality control and final inspection of both the manufactured products and the semi-finished products and raw materials. Both the theoretical calculation/design and the component dynamics can be analysed within the product development process.

Stetternichter Staatsforst 52428 Jülich North Rhine-Westphalia Germany
