## About this organisation

### Machine translation

This profile has been machine-translated based on data provided in German.

ProTec Polymer Processing GmbH is an internationally active system supplier for the plastics industry based in Bensheim and is part of the internationally operating Schoeller Group. With our know-how and our flexible approaches, we are leaders in the fields of material handling, plastics processing, recycling and complete systems for the production of long fibre thermoplastics (LFT pultrusion systems). Our products and solutions and

ProTec offers a complete production line for the manufacture of long fibre reinforced thermoplastics (LFT) in granulate form and as UD tapes (unidirectionally reinforced tapes). The system is highly flexible and is designed for variable formulations. The LFT pultrusion system from ProTec is tailored to the economical production of high-quality thermoplastics with fibres in pellet length. In practice, LFT materials with fibre lengths of 7 mm to 25 mm are common. In the injection moulding process, LFTs produce highly resilient lightweight components with a very good surface quality, as required in the automotive industry in particular. ProTec's LFT system technology is suitable for producing a wide range of materials with different fibre reinforcements and a diverse polymer matrix, which can also be compounded directly during LFT production. Even the technically difficult combination of carbon fibre with PP can be reliably produced.

## About this organisation

<b>Main areas covered</b>	LFT pultrusion systems
<b>Infrastructure</b>	In-house LFT technical centre
<b>Certifications</b>	ISO 9001
<b>Keywords</b>	Long fibre reinforced thermoplastics, LFT, LFT granules, UD Tapes, LFT Pultrusion
<b>Memberships</b>	

## Overview of lightweighting expertise
