

Fraunhofer Institute for Non-Destructive Testing (IZFP)

About this organisation

Machine translation

This profile has been machine-translated based on data provided in German.

The Fraunhofer IZFP... - ...is an internationally renowned R&D centre in the field of non-destructive testing methods, - ...researches and develops technologies for non-destructive monitoring for material, component and product characterisation on a broad basis, from the basics to product maturity and marketability, and - ...develops application-orientated solutions up to prototype and series production capability.

Efficient lightweight construction can only be realised through the consistent application of non-destructive monitoring as an integral part of product and process development. Methods and systems for testing lightweight structures are therefore an important focus of Fraunhofer IZFP's research and development work, supplemented by research into targeted service life management (correlation of component defects with ageing mechanisms such as characterisation of defect-related damage development). The Fraunhofer IZFP's holistic, innovative approach logically encompasses the entire value chain, from the development of materials, components and production processes to operation, service and recycling.

Campus E3.1
66123 Saarbrücken
Saarland
Germany
