

About this organisation

Our company is the leading producer of premium quality industrial rayon, marketed worldwide under the brand name CORDENKA®. This high-tenacity, cellulose-based man-made fiber is used as reinforcing material in high-performance tires, mechanical rubber goods and other plastic composites.

CORDENKA® fibers are characterized by an excellent balance between stiffness and impact strength when reinforcing thermoplastics, while at the same time having a lower density than, for example, glass fibers. Furthermore CORDENKA® rayon is bio-based and biodegradable so that it contributes to sustainable components. Cordenka works together with partners from research and industry to develop those specific areas of application. Additional work is also underway on developments that will allow the application of CORDENKA® in thermoset composites as well.
