About this organisation

Machine translation

This organisation has been machine-translated based on data provided in German.

We offer tool drawings that can be the basis for your tool planning to save time and money.

Post-processing is often necessary in lightweight construction. Optimising machining processes such as drilling, milling and sawing is our core competence. Tools that are adapted to the material to be machined in terms of axis angles, feed rate, speed and number of teeth offer potential savings and process reserves. In order to identify these process reserves, cooling, extraction, maximum speed and vibration are analysed during the machining process. For some applications, the Aerotech turbine extraction system, air-cooled milling with ambient air, can be used as a problem solver.

Bösingerstraße 5
78727 Oberndorf
Baden-Württemberg
Germany
