

About this organisation

Machine translation

This organisation has been machine-translated based on data provided in German.

As a technical trade journal, the Industrieanzeiger reports in print and online on current developments in industrial production, highlights underlying correlations, explains solutions and identifies the opportunities and risks of new developments. Topics include mechanical engineering, subcontracting, vehicle construction, automation, robotics and handling as well as new technologies such as mixed reality and digitalisation.

Lightweight construction is an important editorial topic in the magazine, on the one hand for systems and machines, and on the other for vehicles and components. Materials and design topics also play a major role here.
