Manufacturer devices and systems

#### About this organisation

#### Machine translation

This organisation has been machine-translated based on data provided in German.

GE Inspection Technologies is a provider of non-destructive testing solutions that improve productivity, quality and safety. We develop and manufacture equipment and systems for visual, ultrasonic, radiographic and eddy current inspection. Applications focus on solutions for the aerospace, power generation, oil and gas, automotive and metals industries.

Improved vehicle equipment leads to an increase in weight. The higher weight also means higher fuel consumption. This is just one argument in favour of the current lightweight design of new vehicles. While steel was the most important material for automotive construction in the past, other materials such as plastics, composites, magnesium and aluminium will gain in importance in the future. The use of different materials leads to new joining techniques, as traditional joining techniques such as spot welding can only be used to a limited extent. Combined joining processes are state of the art (hybrid joining). With our devices and systems, you can test the joints non-destructively: e.g. weld seams, spot welds, laser seams, MIG/MAG joints and bonded joints. By replacing the previously necessary destructive testing, costs can be saved in vehicle construction. Process optimisation through feedback of digital test data.

Robert-Bosch-Str. 3 50354 Hürth North Rhine-Westphalia Germany

Manufacturer devices and systems

About this organisation			
Main areas covered	Sensors, devices and systems		
Infrastructure	Test bench, sensors		
Certifications	ISO 9001, EN 17025		
Keywords	Non-destructive material testing		
Memberships			
wiembersnips			

# Overview of lightweighting expertise Machine translation This organisation has been machine-translated based on data provided in German. Manufacturing Research Development & Supply Offer Products Machines and plants, Software & databases, Systems and end products Services & consulting Training, Consulting, Distribution, Validation, Simulation, Maintenance and repair
