

About this organisation

Machine translation

This organisation has been machine-translated based on data provided in German.

Compositence offers solutions for the efficient development and production of components made from continuous fibres. With our patented production system, 2D / 3D preforms / stacks are manufactured directly from continuous fibres (carbon, glass or alternative fibre types) or tapes with a thermoplastic or thermoset matrix.

We offer production systems for depositing the different material classes (dry fibres, thermoplastic tapes and TowPregs); the different systems are controlled with the corresponding software. The software also supports you in production simulation and component design by providing appropriate interfaces. Typical applications are load-bearing, flat components, e.g. in motor vehicles, wind turbines, aviation, mechanical engineering or the sports and leisure industry. In addition to manufacturing systems, we also offer engineering services and the production of preforms and stacks. Our product portfolio includes - Systems for preforming with continuous fibres - Software for simulative component design and production simulation - Prototyping and small series - Preform / stack production

Mollenbachstraße 25
71229 Leonberg
Baden-Württemberg
Germany
www.compositence.com

Organisation type

Small or medium-sized enterprise

Sectors

Employees

10 up to 49

Turnover

€2m - €10m

Funding

Compositence GmbH

Leonberg

About this organisation

Main areas covered Automated Tape Placement Machines

Infrastructure AFP - Attachments, Consultation / compacting

Certifications

Keywords Tape Placement, Fibre placement, Stack - Production, Blank - Production, AFP; ATP

Memberships

Overview of lightweighting expertise

Machine translation
