Production Control Department

About this organisation

Machine translation

This organisation has been machine-translated based on data provided in German.

The Fraunhofer Institute for Physical Measurement Techniques IPM develops customised measurement technology and systems for industry. Many years of experience with optical technologies form the basis for high-tech solutions in production control, object and mould detection, gas and process technology as well as in the field of thermal energy converters.

For production control, Fraunhofer IPM develops optical systems and imaging processes that can be used to analyse surfaces and 3D structures in production and control processes. For lightweight construction, the fluorescence measurement technology developed here is a particularly promising candidate for quality monitoring - whether for detecting impurities or for testing specifically applied coatings. Work is currently underway on the development of a fluorescence measuring head for the needs-based application of release agents. The results should make the application of release agent quantifiable and automatable. Studies are also being carried out on residues of process auxiliaries on workpieces and correlated with the results after coating.
