Process development for polymer recycling

#### About this organisation

#### **Machine translation**

This organisation has been machine-translated based on data provided in German.

As an institute for applied research, we are leaders in the fields of process engineering and packaging. We create real added value on behalf of industry, government and science. The circular economy is a major challenge that we are facing up to. And we are already offering innovative solutions: With our patented solvent-based recycling process, for example, we recover high-quality plastics from post-consumer waste.

The Process Development Polymer Recycling department develops concepts and processes for high-quality plastics recycling from post-industrial and post-consumer waste. With the solvent-based recycling process developed at the institute, the Fraunhofer IVV offers a recycling process with particularly high cleaning performance, so that even plastics from composites and contaminated post-consumer waste can be processed into high-quality and pure polymers. Gentle processing makes it possible to produce recyclates with virgin material properties. Fibre-reinforced plastics or other plastic composites are frequently used in lightweight construction in particular, which often cannot be recycled using conventional recycling processes. Solvent-based recycling is a suitable solution for this.

Giggenhauser Str. 35 85354 Freising Bavaria Germany ☑ www.ivv.fraunhofer.de

Main areas covered	Recycling, Polymer recycling, Plastics
Infrastructure	Recycling plants
Certifications	
Keywords	Plastic recycling
Memberships	

**Organisation type** Non-university research institution

Sectors No specific sector

Employees 250 up to 499

**Turnover** €10m - €50m

Funding

Process development for polymer recycling

Overview of lightweighting expertise				
Machine translation				
This organisation has been machine-translated bas	sed on data provid	led in German.		
	Research	N Development	Aanufacturing & Supply	
Offer				
Products				
<b>Services &amp; consulting</b> Consulting, Testing and trials, Technology transfer	$\checkmark$	$\checkmark$		
Field of technology				
Design & layout				
Functional integration				
Measuring and testing technology				
Modelling and simulation				
Plant construction & automation				
<b>Recycling technologies</b> Downcycling, Material separation, Recycling, Upcycling	$\checkmark$	$\checkmark$		

Process development for polymer recycling

Overview of lightweighting expertise					
Machine translation					
This organisation has been machine-translated based on data provided in German.					
	Research	Development	Manufacturing & Supply		
Manufacturing process					
Additive manufacturing					
Coating (surface engineering)					
Fibre composite technology					
Forming					
Joining					
Material property alteration					
Primary forming					
Processing and separating					
Textile technology					

Process development for polymer recycling
