

# Dipl.-Ing. Hölscher GmbH & Co. KG

*Special solution in façade construction*

## About this organisation

### Machine translation

This organisation has been machine-translated based on data provided in German.

Modern architecture, and therefore also façade construction, is characterised by a multitude and interplay of heterogeneous materials and components. This results in the need for integrated planning that takes into account both the functional and design aspects of the individual components and their interfaces. We therefore focus on the planning and realisation of the entire building envelope.

In addition to the standard solutions offered by system manufacturers in window and façade construction, we work together with architects and planners to develop property-specific solutions and can offer almost all services relating to the building envelope. We offer a comprehensive range of services and products. Starting with advice during project development, through calculation, design and production, to final installation and acceptance of the building project on site. Since its foundation in 1946, the company has stood for a symbiosis of competent engineering and a high level of craftsmanship.

Geefacker 16
